Abstract not available for AT395099B
Abstract of correspondent: **US5056879**

A pull-out guide assembly for use on each of opposite sides of a drawer includes a pull-out rail mounted on the drawer and a supporting rail mounted on a furniture body. Rollers are arranged between running flanges of the rails. The running flanges of the rails are inclined downwardly towards the rear. Thus, when the drawer is in the extreme front position of a path of extraction, it is acted upon to move in the closing direction by a horizontal force component. At the same time, the drawer is held in such front position by a locking device.
